PROJECTS

► Innshot - Online Resort Booking

- Built an online resort booking where resortowner can add the resort and traveler can book the resort, This Project is developed using MERN Stack.This contains Three modules, they are Admin, Users and ResortOwner.

Key features includes

- User can register and to verify his account by nodemailer link verification.then only he can book the resort by using razorpay integration and cod method also available for the payment.
- Resort owner also verifying his account by nodemailer link verification then only he can add the resort,adventure,destination.after adding admin want to approve then only users can see the details added by resortowners.
- Admin function is to manage resort,adventures,destinations,resortowners,and in dashboard he can view the details of cancelled and booking of resorts implemented in chartjs

Repository:<https://github.com/ReshnaRaj/Innshot>
